INTRODUCTION AND BACKGROUND

CHAPTER I INTRODUCTION AND BACKGROUND

1.1 Project Background:

The Middle Umiam (IWMP-I) project is located in Myllem C&RD Block between latitudes of 25°32'0" and 25° 35'30" N and 91° 48'30" and 91° 51'30"E, East Khasi Hills District of Meghalaya. Consisting of a single micro-watershed, the project area is drained by the Umiam River. The total area is 1390 Ha. with 1000 Ha to be treated under the Integrated Watershed Management Programme (IWMP).

The Project area is located at a distance of about 8 km from Shillong the State Capital. A total of four villages are covered under the project.

These are – (i) Umlyngka (ii) Nongumlong (iii) Mawklot (iv) Myrkhan.

1.2 Micro-watershed Information:

The micro-watershed code is **3C1B5a4j** as codified by the North East Space Application Centre (NESAC). The total area of the micro-watershed is 1390 Ha. with 1000 hectares to be treated under the Integrated Watershed Management Programme (IWMP)

1.3 Need and Scope for Watershed Development:

The micro-watershed **3C1B5a4j** falls under the High Priority category as per the prioritization of watersheds by the North East Space Application Centre (NESAC). The villages have one road connectivity. The farmers are mostly small and landless and 300 households are below the poverty line, which is 30% of the total households. Jhum/ Bun cultivation is practiced by most of the inhabitants of these villages on the slopes.

Even though the area receives ample rainfall during the monsoons, there is acute shortage of water during the dry seasons and the villagers have to depend on small seasonal springs for water even for domestic use.

1.4 Other developmental projects/schemes running in the Project Area:

The other developmental projects/schemes undertaken in the Project Area are:-

- i. MGNREGS
- ii. Agriculture Department
- iii. Total Sanitation Campaign (TSC)
- iv. Indira Awas Yojana (IAY)

CHAPTER II
BASIC INFORMATION OF THE PROJECT AREA

CHAPTER II

BASIC INFORMATION OF THE PROJECT AREA

2.1 Location:

The Project area is about 8 kms from Shillong and falls under the Myllem C&RD Block of East Khasi Hills District. The total Geographical area is 1390 Ha. The Watershed lies between latitudes of 25°32'0" and 25° 35'30" N and 91° 48'30" and 91° 51'30"E. The area is bounded by National Highway 44 on its Upper ridges, the Umiam River down below which also serve as the common drain of the Watershed. The main streams flowing under this Watershed are Ummawrie, Umsimkhar, Umpyrda, Wahlynjor, Umbah, Ummawpun and Umsohlang.

2.2 Physiography:

The area is composed of undulating tract with moderately gentle sloping land to very step sloping lands towards the Umiam River with small pockets of small to medium valley lands. The general sloping land of the Watershed area is 5° – 10° upto more than 45°. The elevation is between 1100m upto 1600m from M.S.L.

Table 2.1: Physiographic details

Elevation (metres)	Slope Range (%)	Order of watershed Sub/Micro-watershed	Major streams	Topography
1100 m to 1600 m	0% to > 45 %	Micro Watershed	Umiam	Moderate to Steep Slopes

2.3 Drainage:

The main streams flowing under this Watershed are Ummawrie, Umsimkhar, Umpyrda, Wahlynjor, Umbah, Ummawpun and Umsohlang which are 4th order streams flowing in a north-east direction.

2.4 Soil:

Soil Texture is clay loam to sandy clay loam. Soil depth varies from very shallow to deep. Soils are permeable and generally acidic in nature. Owing to highly undulating land form and absence of good vegetation cover, the area is exposed to erosion hazards. The soil nutrient status in the area shows a general trend of high N content, medium to high K content and low phosphorous content.

Table 2.2: Details of soil erosion in the project areas:

2.5 Climate:

The Watershed area is characterized by temperate climate. Maximum temperature ranges between 15⁰ to 25⁰ C and minimum temperature is between 5⁰ to 17⁰. The climate is moderate type with a pleasant summer and extreme cold in winter. The annual relative humidity is between 70 to 85% annually. The average rainfall is 2200mm (approximately).

									Potato	50
									Cabbage	10
								Total		160 Ha

2.6 Agriculture: Agriculture is the primary occupation of the people of the area. The people mostly practice Jhum. The Jhum plots vary from 0.5 to 1.0 Ha, and are cultivated for 3-4 years. The principal agricultural crops grown in the Jhum fields are paddy, potato, cabbage and vegetables. Fruits crops like *Prunus nepalensis*, *Elaegnus latifolia*, Orange, Plum, Peach, different varieties of Pears are also grown.

Table 2.4: Crop yield and production

Crops	Area (ha)	Average Yield (Qtl) per ha.	Total Production (Qtl.)
Paddy	100	35	3500
Potato	50	80	4000
Cabbage	10	150	1500

2.7 Natural Vegetation: The tree species common to the watershed area includes – *Pinus khasiana*, *Quercus spp*, *Betula spp*, *Michelus spp*, *Schima khasiana*, *Myrica esculenta*, *Callicarpus arborea* etc. However, due to Jhum cultivation the forest cover of the area has reduced considerably.

2.8 Socio-Economic Profile: Economically, the area is backward in the district. The main reason is due to the primitive way of agricultural practices like jhumming.

Demographic Status: The total households in the watershed project is 997 with a total population of 5056, of which 2452 are male and 2604 are female. The detail of the household in each of the villages in the watershed project is as follows:

1.	Umlyngka	-	340 Nos
2.	Nongumlong	-	274 Nos
3.	Mawklot	-	336 Nos
4.	Myrkhan	-	47 Nos
			997 Nos

Infrastructure facilities:

- 2.1.1 *Roads:* All the villages within the Project Area are connected by road.
- 2.1.2 *School:* There are 6 Nos of Primary Schools, 2 Nos of Secondary School and 1 No of Higher Secondary School within the Project Area run by the Mission.
- 2.1.3 *Electricity:* Connections have been provided to the villages.
- 2.1.4 *Health:* There is no Primary Health Centre in the Project area and the local population have to depend on facilities available at Shillong.
- 2.1.5 *Water Supply:* Drinking water supply have been provided by the PHE Deptt. However, during lean season the entire population have to depend on springs available in the area as the supply is not sufficient to meet the daily requirement.
- 2.1.6 *Market:* The main market where the people sell their produce is at Shillong.

2.1 Land use and land cover : As per the land use land cover map generated by NESAC, Meghalaya from Satellite Image taken during 2005 – 2006

(LISS – III, Image) the Watershed area has been broadly classified into the following land uses.

a) Built-up Area	=	134.42 Ha
b) Water bodies-River/Stream-Perennial	=	0.1678 Ha
c) Agricultural land-crop land-Kharif crop	=	37.8422 Ha
d) Forest	=	258.06 Ha
e) Tree clad Area-open	=	836.42 Ha
f) Wastelands-barren Rocky/Stony waste	=	<u>123.09 Ha</u>
Total	=	1390 Ha

2.11 PROBLEM OF THE WATERSHED AREA AND DEVELOPMENT STRATEGY: Over grazing, deforestation, faulty cultivation, Bun cultivation in the watershed area have led to devastating effect downstream. During the rainy period the watershed area gets excess amount of rainfall and causes erosion. Erosion leads to destruction of farmlands, reduce crop production, drop in flow of water in dry season, flooding, siltation of reservoirs and canals etc.

The problem of agriculture land in the watershed area is that people practicing permanent cultivation are very less due to the shortage of irrigated water. The people still practice the traditional farming system. In most of the area of the watershed, the people take up agriculture on slopes varying from 5 to 33% without any conservation measures. With the increase in the population, there is also an increase in the demand for food and shelter. This increasing demand for essential goods have made people encroach into the forest area. These forest areas are being converted into habitation and agricultural land creating danger not only for soil erosion, but also ecological imbalance in the watershed. In general, maintenance of the agricultural land is very poor and terraces need proper maintenance and protection.

The problem of the forest land is due to the increase of human and cattle population. The forest area has been destroyed gradually and drastically as a result of which most of the area is now covered only by shrub forest and scattered tree species leading to shortage of timber and fuel wood and soil erosion.

The people in the watershed as per Participatory Rural Appraisal (PRA) clearly showed that they are interested in horticulture cultivation. Every household have their own Orchard but people cultivate horticultural crops with the traditional type of cultivation without any conservation measures leading to decrease in production year after year and abandoned plantations.

CHAPTER III
PROJECT PLANNING & INSTITUTION BUILDING

CHAPTER III

PROJECT PLANNING & INSTITUTION BUILDING

3.1 Scientific Planning

- i) Base Line Survey: To establish a benchmark for assessing the impact of any intervention (pre-project & post project) a baseline survey is essential. The baseline survey included household census & socio-economic survey by using structured and semi –structured questionnaires, bio-physical survey to identify and assess the status of natural resources in the project area.
- ii) Participatory Rural Appraisal: To further obtain information on the project area, the people, resources, various PRA techniques like resource mapping, social mapping, seasonal calendars, matrix ranking, Venn diagrams were used.
- iii) GIS & Remote Sensing: To facilitate the process of prioritization and planning Geographic Information System was use. The land use and land cover (LULC) maps were prepared by the North Eastern Space Application Centre (NESAC) using the LISS III images (2006). The activities were located on the field by using GPS and accordingly transferred to the maps on GIS platform.

3.2 Project Implementing Agency:

The PIA is the Soil & Water Conservation Territorial Division, Shillong, East Khasi Hills District of Meghalaya. The Project Manager will be the Divisional Soil and Water Conservation Officer and will be assisted by an Asst. Soil & Water Conservation Officer along with WDT members in which expertise is drawn from the relevant fields for achieving smooth and successful implementation of the project.

3.3 Institution Building

i) Watershed Committee (WC)

The Watershed Committee of Middle Umiam, IWMP I was constituted with the active involvement of the villagers with strong support of the Traditional Institutions (Village Durbar/Council). The Middle Umiam Watershed Committee has been registered under the Society Registration Act 1983.

ii) Self Help Group

Awareness programmes were organized in the villages to inform and sensitize the people on the essence of organizing themselves in to homogenous groups for uplifting their livelihood especially for the women and the landless. Discussions were held at length with the WDT on the scope and procedure of group formation, availing credit, grading of the groups and so on.

CHAPTER VI
CAPACITY BUILDING

CHAPTER VI CAPACITY BUILDING

Capacity Building is a process to systematically upgrade the skill of individuals or groups for achieving a specific target. Capacity building in the project has been planned for all the stake holders involved i.e. State Level, District Level, Project Level and Village Level. The relevant details pertaining to Capacity Building has been shown below.

Table 6.1: List of approved Training Institutes for Capacity Building:
